## **Data Flow**

Data flow refers to how data work and transit from one endpoint to another.

Stage of data flow from Ms Server to API server:

- 1. Pulling Data from Daily procedure SQL server and store it into a backup file aligned by date.
- 2. Login to API and add a token to local storage.
- 3. Posting daily transactions from local files to API Server can be manually or automatically.

# **Project Structure**

This is how the project is structured inside the project folder. Each folder contains its purpose file.

```
---dbcsv //Backup daily transaction by date and store
---doc // Document
---logs // Events logs
```

### **Detail View**

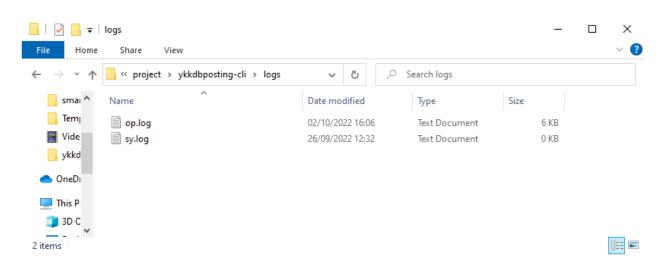

Mode	LastWriteTime		Length	Name

# **Event log file**

Where is the journal of the event?

Each process is properly written into a log file at the specific date time. Here is the event log file located.

logs/op.log

### The log should look as following:

```
op.log - Notepad
                                                                                                                                                                ×

```

# Install and Deployment

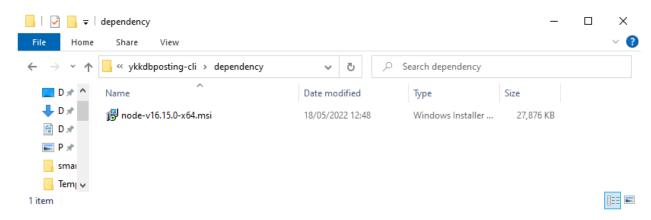

There are few packages that need to be installed before running the script.

## 1 Dependency

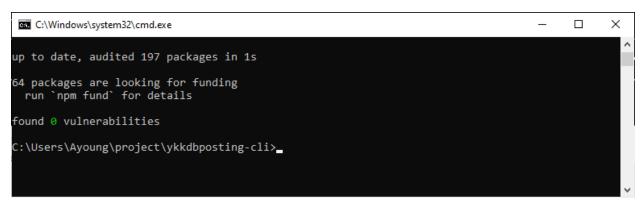

• Nodejs version: v16.15.0

• npm version: 8.5.5

Install Nodejs in the dependency folder.

initial project by install dependency go to project directory enter the following command npm install

## npm link

```
C:\Windows\system32\cmd.exe — X

C:\Users\Ayoung\project\ykkdbposting-cli>npm link

up to date, audited 3 packages in 1s

found 0 vulnerabilities
```

# 2 Deploy SP Script

Get SP\_DAILY\_TRX.sql and run on MSSQL server at each database that needs to post the transaction to API.

```

# **Running and Create New Script**

1. script posting daily transaction

ykkdbposting.bat

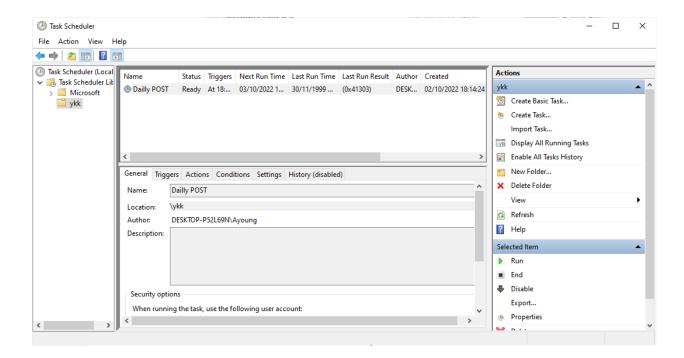

02/10/2022 18:00

Windows Batch File

### Run batch file with Task Scheduler

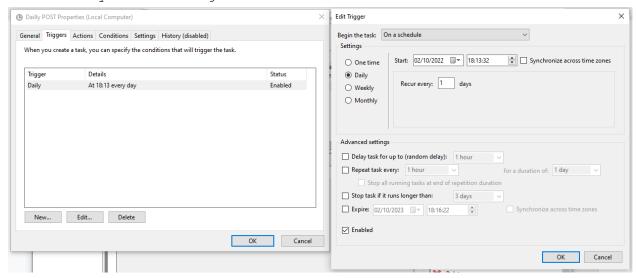

To use Task Scheduler to run the batch file automatically at a specific time, use these steps:

- 1. Open Start.
- 2. Search for Task Scheduler and click the top result to open the app.
- 3. Right-click the "Task Scheduler Library" branch and select the New Folder option.
- 4. Confirm a name for the folder for example, ykkdbposting.bat.
- Quick note: You don't need to create a folder, but keeping the system and your tasks separate is recommended.
- 5. Click the OK button.
- 6. Expand the "Task Scheduler Library" branch.
- 7. Right-click the project folder.
- 8. Select the Create Basic Task option.

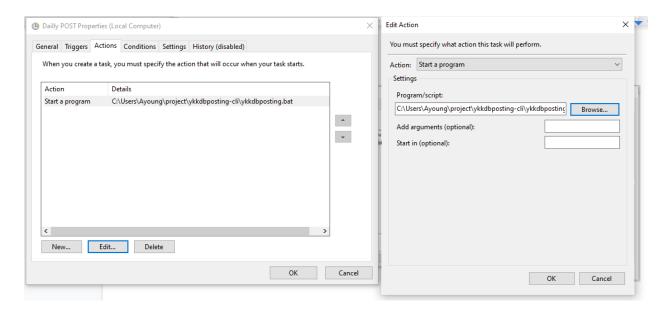

## Add Trigger:

Choose Daily and starting time.

## Add Action:

Add script into action.

### Create New Script

To create a new script for new store just change the following parameter:

- 1. Store name
- 2. Transaction date
- 3. Mall name
- 4. Tenant name

### Save in to a new bat extension file as bellow:

```
## ykkdbposting.bat
      @ECHO OFF
 1
 2
 3
      : Expects a date format of 'YYYY-MM-DD'
      set dt=%DATE:~6,4%-%DATE:~3,2%-%DATE:~0,2%
 4
      set dt=%dt: =0%
 6
      echo Posting Current Date At: %dt%
 8
 9
      @REM ykkdbposting-cli p STORE Name, Date, Mall Name, Tenant Name, Post Id
      ykkdbposting-cli p TLJAEON1 %dt% CM271MegaMall CM271TheAsianKitchen PostID
 10
```
